Abstract :

A simple software that uses the concept of doubly linked list to implement various playlists of different songs sorted in terms of genre, artists, albums etc. Also provides a count of the number of times the particular song has been streamed on the platform thus making a top streamed chart on a regular basis.

Provides ease of access to the user to listen to the songs he or she wants. Also opens up a doorway to finding new artists and songs one might like based on the genres one listens to.
